

Finishing the hard to finish

Metal Guard® 900

One-Step Outdoor Rust Prevention

Substrates

Safe on all metals as it is pH neutral.

Simplify Your Process

Proven effective to protect against corrosion in one easy step. Applied before or after finishing, simply roll on and wipe off. No equipment or tanks are required.

Testing

Laboratory test using ASTM D 1748 parameters prove that Metal Guard 900 can provide greater than 3 months of water fog protection.

Remediation

Lower VOC's than any existing rust prevention process making it safer for the environment and the user.

Benefits

Self-healing, 1-step application and wipe off saves time and money on equipment and processes. Suitable for indoor & outdoor storage.

Want Proof?

One customer that is a heavy equipment manufacturer used Metal Guard 900 on parts being shipped overseas.

The customer used a paint roller to apply Metal Guard 900 to a fully finished part prior to loading it onto the cargo ship. By the time these parts arrived to their destination, they had been exposed to salt air elements for over 60 days.

This photo proves that Metal Guard 900 can provide over 2 months of rust and corrosion protection from the elements.

The part on the upper right was protected with a competitor's product and shrink wrapped. Notice the visible corrosion.
